## BODY SENSOR™

Designed to keep your body temperature stable, (cools you down when you're hot and warms you up if you're cold).

### Why do I want it?

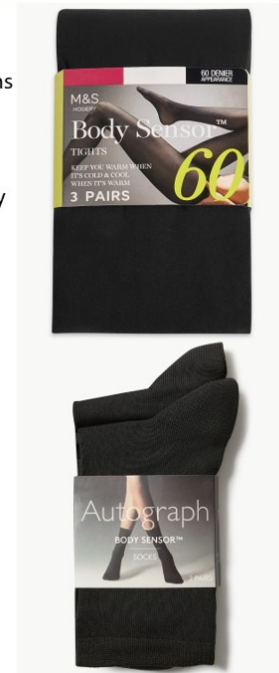

In unpredictable weather or when you are moving from heat to cold throughout the day Body Sensor products are perfect to keep you at an even temperature,

### How does it work?

Body Sensor™ uses a warming yarn which keeps you cosy when it's cold and then as you warm up it wicks the moisture away from your body to the outer layer of the fabric, regulating your temperature throughout the day.

### Where do I find it?

Tights  
Socks  
PJ's
